Assumptions:

1. Surrogate Key "addr_no"
   Extracted all of a passenger's address details into a separate Address table and
   assumed the use of a system-generated, unique identifier addr_no as its primary key.

2. Surrogate Key "bk_no"
   In the Booking relation (manifest), rather than a composite key, assumed a
   system-generated, unique identifier bk_no as its primary key.
